

Perfect surfaces through:

New dry polishing medium M5/300

The new M5/300 dry polishing medium is a further top-quality product for polishing workpieces to a mirror finish and has been specially developed to give the best possible scratch-free surfaces.

It consists of an especially soft substrate and high-quality, very fine grain polishing agents.

The granulate is treated in a special process so as to make it suitable for polishing brass, stainless steel, ceramics and carbide metals to a high shine.

- Scratch-free surfaces, especially suitable for polishing implants in cobalt chrome and titanium.
- Considerably reduced orange peel effect
- More intense deep shine
- Much smoother surfaces can be attained (up to Ra 0.01, Rz 0.1)
- Areas of application include:
 - Mirror-finishing polishing of implants
 - Mirror-finish polishing of carbide tools
 - Mirror-finish polishing of watch cases in stainless steel or porcelain, etc.
